

NUTRI/CELL

Encapsulated Micro-Feeder

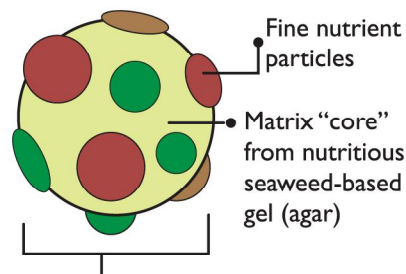

Simply mix a small measure of the powder (spoon included) in half a cup of aquarium water and distribute in the tank or target-feed using a pipette. Full instructions in jar

Nutri/Cell powder needs no refrigeration

- * Complete Diet for filter & suspension feeding corals and invertebrates
- * With Phyto and Zooplankton ingredients

Nutri/Cell Micro-Capsules

80% of Nutri/Cell beads are 50 microns or less, replicating the size of microplankton

Final "cluster" capsule is sized from approx. 10 - 80 microns

- * High Nutrition Formula for vitality and colour
 - higher nutrition density than live plankton
 - more concentrated than most liquid foods
 - economical in use
- * Neutrally buoyant to stay in suspension longer
- * Stable structure
 - keeps its integrity in the water whilst maintaining digestibility
 - reduces nutrient leach into the aquarium, less pollution

NUTRI/GEL

High-Density Colour Enhancing Gel Mix

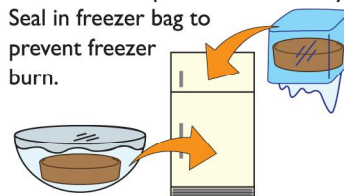

Simply mix the powder with three times the volume of water to create a firm water-stable gel in minutes. Full instructions in jar

- * Complete Diet for all fish sizes - Marine & Freshwater
- * Mix to create a firm, water-stable, highly scented soft gel food ideal for even finicky eaters and new stock
- * Nutrition rich formula with easily digested whole fish, Chlorella & Spirulina algae, and seaweed, to enhance the colour and vitality of your fish
- * Feed as gel cubes or spread onto surfaces for foragers
- * Ideal substitute for frozen foods with negligible nutrient loss
- * Nutri/Gel powder needs no refrigeration
- * Now also available: Algae/Gel

Prepared Gel Storage:

Freezer: Will preserve indefinitely. Seal in freezer bag to prevent freezer burn.

Refrigerator: Keeps 7 days. Store in container covered or sealed with plastic wrap.
